DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basic for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2,4-8,10-13 and 29-30 are rejected under 35 U.S.C. 102(b) as being anticipated by Rydell et al (5,445,638).

Rydell discloses in figures 1 and 3, a surgical device for treating tissue having the limitations as recited in the above listed claims, including: a pair of yoke shaped members at 60,64 mounted in spaced array which includes a slot opening (the slot opening occurs at either side of element 60,64), a cutter 20 or 140 mounted intermediate the spaced members which also discloses a cutting edge, where the cutter is displaced from obstructing transverse alignment (occurs at the blade edge 140 in its flex position to cut through the obstructing tissue) of the slotted opening, and where an actuator 150 which links to the cutter for controlling movement between the open and closed configurations, and where the device further includes a mounting structure at 62 which disposes at the distal end of an elongated body 8 to support the members in spaced array with the slots, the mounting structure also supports the cutter for movement the intermediate members, where the actuator further comprises a manual manipulator at 42 mounted near the proximal end of the body and linked to the actuator for moving the cutter. Note that the procedure in fig. 9a discloses the width of each of the slots openings convergingly tapers inwardly (fig. 9a) from the forward edge, and where the device further includes electrical

connections to each of the members for applying electrocautery signals thereto (see col.5, lines 55-67), where the cutter also includes a contoured surface at 24 for engaging a reference surface to transform translational movement of the cutter into translational and lateral movement relative to the anvil, and where the reference surface includes a wear resistant at 28b which disposes at the distal end of the body to engage the contoured surface of the cutter.

Allowable Subject Matter

2. Claims 3 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Response to Arguments

3. Applicant's arguments filed 12/11/2007 have been considered but are moot in view of new ground(s) of rejections. Applicant is asked to please refer to the modified prior art rejections above where examiner addresses applicant's concerns regarding prior art rejection.

Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

Art Unit: 3734

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
